

Jakob Gabriel

Digital Business Value Engineer

Erfurt – Passau, Germany | jakob.gabriel5@gmail.com | linkedin.com/in/jakob-gabriel | [Portfolio](#)

PROFESSIONAL SUMMARY

Digital transformation and advanced analytics expert with 7+ years of experience scaling smart-factory solutions, optimizing manufacturing processes, and delivering measurable business value. Proven track record of leading 150+ digitalization use cases, achieving €1M+ in annual savings, and driving AI-driven process optimization across global production sites. Passionate about enabling innovation, designing purpose-built AI agents, and empowering cross-functional teams.

PROFESSIONAL EXPERIENCE

Digital Business Value Engineer

Feb 2026 – Present

OESL Automotive (A portfolio company of Regent LP) · Karben, Germany

Driving digital transformation and analytics strategy across global manufacturing sites during company carve-out, ensuring business continuity and scalability of established smart factory solutions.

- Ensured seamless continuity of 150+ digitalization use cases during company carve-out and transition to new ownership.
- Maintained and evolved energy and process efficiency analytics workflows across global manufacturing sites.
- Spearheading AI-driven process optimization initiatives to automate complex manufacturing decisions.
- Built organizational capabilities through training programs, expanding the Smart Factory network worldwide.
- Redesigned processes leveraging analytics insights to reduce lead times and increase operational efficiency.

Key Skills: Use Case Scaling · AI-Driven Process Optimization · Process Automation · Digital Transformation · Agile Project Management

Digital Business Value Engineer

Jan 2024 – Jan 2026

Continental AG · Karben, Germany

Driving digital transformation and analytics strategy across global manufacturing sites, with a focus on measurable value creation and scalability.

- Scaled more than 150 digitalization use cases globally, achieving more than €1M in annual cost savings by applying data-driven optimization.
- Developed energy and process efficiency analytics workflows that became reference models for data-driven manufacturing.
- Championed more than 15 innovation initiatives annually, guiding proof-of-concepts until operational utilization.
- Built organizational capabilities through 20+ training programs, expanding the Smart Factory network worldwide.
- Redesigned two major processes to reduce lead times by more than 10%, leveraging analytics insights.

Key Skills: Use Case Scaling · System Scaling · Process Automation · Process Standardization · Agile Project Management · Digital Transformation

Analytics and Data Engineer

Jan 2022 – Dec 2023

Continental AG · Karben, Germany

Designed and implemented analytics-driven solutions for manufacturing challenges while enabling global scalability across production sites.

- Transformed raw production data into actionable insights, uncovering hidden inefficiencies and improving overall equipment effectiveness.
- Orchestrated cross-functional teams to develop predictive analytics models that prevented production bottlenecks and reduced waste.
- Defined global digitalization standards that unified data quality, analytics methodologies, and reporting across plants.

- Built intuitive dashboards that empowered operators and engineers to make faster, evidence-based decisions.
- Created knowledge-sharing platforms and internal documentation that accelerated learning and scaled analytics adoption enterprise-wide.

Key Skills: Manufacturing Intelligence · Data Analytics · Industry 4.0 · Process Improvement · Predictive Analytics · Knowledge Management

Quality Engineer

Oct 2018 – Dec 2021

Continental AG · Waltershausen, Germany

Ensured product quality during ramp-up through risk management, process optimization, and customer-focused quality control and improvement initiatives.

- Continuous improvement by identifying and eliminating root causes of quality issues, leading to a significant reduction in defect rates.
- Collaborated with cross-functional teams to strengthen FMEA practices, transforming risk assessments into actionable process improvements.
- Designed and implemented inspection concepts for products, enhancing product reliability and traceability.
- Built trusted relationships with customers through transparent communication, acceptance tests, and successful audit results.
- Introduced quality dashboards that visualized real-time KPIs, improving decision-making speed on the shop floor.

Key Skills: Quality Management · FMEA · Six Sigma · Continuous Improvement · Risk Analysis

EDUCATION

Master of Engineering — Applied Polymer Engineering

Apr 2019 – Dec 2024

University of Applied Sciences Schmalkalden · Grade: 2.0 (3.0 US GPA)

- Master Thesis: Process Mining in Manufacturing — A Case Study on Data-Driven Potential Analysis.
- Project: Developed a predictive model for weld strength using infrared imaging and process data analytics.

Bachelor of Engineering — Polymer Engineering

Oct 2015 – Sep 2018

Duale Hochschule Gera Eisenach · Grade: 1.6 (3.3 US GPA)

- Bachelor Thesis: Automation of Testing and Packaging using Robotics and Vision Systems in an Assembly Line.

SKILLS

Digital Transformation

Industry 4.0 · IoT Systems · Process Automation · Change Management

Data Engineering, Analytics & AI

MS Fabric · Power BI · Python · SQL · n8n · AI Agent Design · Predictive Modeling · Statistical Analysis · Machine Learning

Process & Quality Engineering

FMEA · Lean Six Sigma · Process Optimization · APQP · Root Cause Analysis

Languages

German (Native) · English (Fluent)

CERTIFICATIONS

The Power MBA

ThePower Business School · Nov 2024

Continental Leading Self Program

Continental AG · Oct 2023

Advanced Analytics Methodologies

AdvancedAnalytics.Academy GmbH · Oct 2021

Product Auditor VDA 6.5

TÜV Hessen · Sep 2019
